Summary

Software Developer with **2+ years of experience** in building and improving reliable software systems. Proficient in **Java** and **Python**, with a strong focus on **REST API development** with **.NET Core**, performance optimization, and **database management** using **SQL** and **MongoDB**. Experienced in **CI/CD environments** and version control systems like **Git**. Adept at solving complex technical challenges and creating robust, scalable solutions.

Experience

Freelance programmer 2022-2024

- Designed and developed web and mobile applications for private clients using **React**, **Flutter**, and **Python**
- Created and customized websites for small businesses using **WordPress** and **JavaScript**

[OSA Commerce](#) 2022-2024

Software Automation Engineer

- Designed and implemented **automation scripts** for web and UI applications using **Selenium** by unit testing. Developed and maintained **E commerce API integrations** using **JavaScript**.
- Diagnosed and resolved **critical bugs** and application exceptions. Utilized **SQL databases** and the **Swagger Hub** to optimize application data management and query performance.
- Documented system functionalities, bugs and technical processes for streamlined development workflows. Coordinated with cross functional teams to deliver high quality software solutions.

Education

B.Sc – Bachelor of Science in Computer Science 2019-2022

- Built a solid foundation in **Algorithms**, **Object Oriented Programming (OOP)**, and **Data Structures**. Completed projects involving **Java** and **Python**, emphasizing system design and performance optimization.
